Size selected DNA was cloned into the pBACe3.6 vector at the EcoRI sites. The ligation products were transformed in DH10B electrocompetent cells (BRL Life Technologies). a 114 c 109 g 146 t 2 others
                 'note-"Organ: prostate; Vector: pT7T3D-Pac (Pharmacia)
with a modified polylinker; Plasmid DNA from the
mormalized library NCI_CGAP_P122 was prepared, and ss
circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was pCR-amplified CDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
of 5,000 clones made from the same library (cloneIDs
985608-986759, 1101192-1101959, and 1217928-1220615).

Specifically, sequences which are cikely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. aureus infection. The polypeptides can also be used in a kit for the immunodetection of saureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S. aureus DNA sequences contained on the computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Barash
                            The present sequence represents a nucleic acid sequence identified in the course of the invention, and expressed in lung, brain, kidney, heart muscle, liver, placenta, small intestine and activated T-cells. The specification also describes sequences encoding human homologues of the yeast RAD50, the Drosophila Septin-2 and Acyl-CoA synthetase. The proteins have immunomodulatory activity. The nucleic acids and proteins can be used to identify activated T-cells in a sample population. They

Enterococcus faecalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 2012; 2084pp; English.

A computer readable medium has been developed which has recorded on it a computer readable medium has been developed which has recorded on it a computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for disposing Enterococcual infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis in the progression of the product of the computer of the product of the progression of the product of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              proteins or other compounds having immunomodulatory activity.                 DNA coding for neurotrophic human elk ligand cytokine - useful as probe to isolate other elk ligand sequences (Claim 7; Columns 27-30; 18pp; English.

The present sequence encodes the human cytokine elk-ligand (elk-L), which binds a member of the tyrosine kinase receptor family. Elk-L cachibits neurotrophic and neuroprotective properties, and has a calculated mol. wt. 35180 daltons and a pl of 9.006. The elk-L cDNA, isolated from a human placental cDNA library, can be radiolabelled and used as a probe for isolating other mammalian clk-L cDNA. Elk-L can be used to treat neural tissue disorders, and as a neural culture reagent, while immunogenic fragments of elk-L can be used to generate specific anti-elk-L antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query

                                                                                                                                                                                                                           as neuro-protective agent

Claim 7; Columns 27-30; 18pp; English.

The present sequence encodes a human elk ligand (elk-L) protein,
which binds elk, has a calculated molecular weight of 35180 and an
isoelectric point of 9.006. Elk-L is a cytokine that can be used to
test cells for elk expression, measure the biological activity of
elk, purify elk by affinity chromatography and as a neuroprotective
agent to treat diabetic, hereditary and nutritional neuropathies
and neurodegenerative diseases. It may also be added to tissue
cultures to prolong the life of neurons. The elk-L cDNA was
isolated from a human placental cDNA library, and is present as a
CDNA insert in the recombinant vector deposited in strain
                                                                                                                                                            Query Match

This is the nucleotide sequence encoding the human elk-L protein, a new cytokine that is the ligand for the elk tyrosine kinase receptor. The extracellular domain of the protein (amino acids 1-213) is used to generate a fusion protein comprising the Fc polypeptide of the human immunoglobulin G1 (extending from the hinge region to the C-terminus). The fusion protein (which has the same activities as the natural elk-L protein) has neuroprotective and neurotrophic activity so is potentially useful for treating a wide range of neurological diseases.

The present sequence encodes human elk-L (elk ligand). The present invention describes antibodies to elk-L polypeptides. The elk-L protein is known to be neuroprotective exhibiting its effect through a trophic mechanism. Examples of diseases that may be treated with elk-L include neuropathies e.g. diabetic, hereditary and nutritional neuropathies, neurodegenerative diseases and other diseases characterised by loss of function or degeneration of neurons.

                                                                                                                                                                                                                                                                                                                        This sequence encodes a cellulose synthase of the invention. The DNA car be used for controlling cellulose synthesis in a cell by introducing the DNA into the cell, expressing RNA with a nucleotide sequence homologous to the DNA or a nucleotide sequence complementary to the DNA. The cells are prokaryotic cells i.e. acetobacterium and/or eukaryotic cells such a years i.e. Saccharomyces spp., plant cells (cotton plants) and cultured years i.e. Saccharomyces spp., plant cells (cotton plants)

increasing starch content of plants, esp. potato and tomato - by introducing into genome a gene for ADP-glucose pyro-phosphorylase activity, fused to plastid transit gene
Bisclosure; Fig 5; 120pp; English.
The inventors claim a method for inc. the starch content of a plant by inc. its ADP glucose pyrophosphorylase (ADPGPP) activity. The method uses a recombinant DNA molecule encoding a fusion protein of amino-terminal plastid transit peptide and ADPGPP. The ADPGPP gene is the glg gene of E. coli Kl2, or its mutant form gig Cl6 (which causes accumulation of more glycogen and has higher affinity for ADP glucose in the absence of an activator). A pref. plastid transit peptide, designated CPP1, is derived from the sskubisco la gene of from the nopaline synthase (NOS) gene.

This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H. pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic closer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used detection in an disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Q20231 ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 48-50; 72pp; English.

Disclosure; Page 48-50; 72pp; English.

Subunit gene (given in Q80085) was assembled by addition of sequences from the 1st exon of the genomic clone with a nearly full-length cDNA of the same gene. The primers given in Q80087-89 were used to: introduce a BgIII+NCOI site at the ATG codon to facilitate cloning into E. coll and plant expression codon to facilitate cloning into E. coll and plant expression codon to facilitate cloning into E. coll and plant expression codon to remove an internal BgIII site. The assembled gene was expressed in E. coll from the recA promoter in a PrecA-gene10L cassette. An initiating ATG codon was placed using the primer given in Q80090 to express the mature gene.

Disclosure; Page 21-24; 35pp; English.

Disclosure; Page 21-24; 35pp; English.

The sequence represents a potato tuber ADP-glucose-pyrophosphorylase small subunit gene. The gene is modified by site-directed mutagenesis to include a BglII-NcoI site at the ATG codon, a SacI site at the stop codon, and an internal BglII site is removed. A methionine initiation codon is introduced for expression of the mature protein in Escherichia coli. The gene is cloned together with the large subunit gene (094439) (on compatible plasmids), and subjected to mutagenesis to give improved variants of the enzyme. The resulting variant genes may be expressed in an oilseed crop plant to reduce the oil content in seeds, for use in feedstuff and food recolute.
                                                                                                                                                                                                                                                                                     27-NOV-1996 (first entry)
Brevibacterium flavum MJ-233 dihydroxy acid dehydratase coding region Dihydroxy-acid dehydratase; EC 4.2.1.9; amino acid biosynthesis; isoleucine; Ile; valine; Val; Corvneform hartning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Prodn of seeds e.g. peanut or soybean having decreased oil content - by providing increased levels of ADP glucose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         primer_bind

A 6 kb genomic DNA KpnI fragment containing an open reading frame (ORF) coding for dihydroxy-acid dehydratase was isolated from Brevibacterium flavum MJ-233. The sequence of the 1836 bp ORF was determined (i.e. the present sequence) and was found to encode a protein of 612 amino acids. The enzyme is involved in biosynthesis of the amino acids isoleucine and valine.

No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Complementary DNA was synthesized from mRNA using a 3' anchored poly(dT) primer. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by digestion with EcoRI and HindIII. The cDNA fragments were directionally cloned into the EcoRI-HindIII restriction site of the pT7T3-Pac vector. The ligated cDNA fragments were transformed into DH10B host cells (Gibco

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized pineal glands library cDNA Library Preparation: M.B. soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AI845473 338 bp mRNA EST 15-JUL-1999

The sequence tag present in the cDNA between the NotI site and the
oligo-dr track served to identify it as a clone from the normalized
adult 8-Day-Embryo library. cDNA Library Preparation: M. Fatima
Bonaldo, Ph.D. Clone distribution: clones will be available through
Research Genetics This clone is also available through the
I.M.A.G.E. Consortium at LLNL (info@image.llnl.gov). IMAGE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          within the mixture. The subtracted library (UI-R-CO) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-Al and UI-R-El clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-Al and UI-R-El library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DHIOB bacteria (Life Technologies) to generate the UT-R-CO library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806,
